Novembre 2025

## **ADVISORS**

# SPRING AI ADVISORS DESCRIZIONE

- Entità in grado di intercettare
  - la request dal ChatClient al LLM
  - la response del LLM prima che arrivi all'utente
- Utilizzi advisors
  - Pre-/post-processamento dei dati al/dal LLM
  - Validazione/filtraggio customizzato
  - Creare flussi di processamento puliti e sequenziali
- Linee guida di buon utilizzo
  - Evitare comportamenti session-scoped
  - Creare più advisors in catena piuttosto che un unico advisor complesso
  - Evitare comportamenti che intacchino la logica del sistema (es. no modifiche al prompt)

- Advisors built-in
  - SimpleLoggerAdvisor riporta informazione dettagliata delle strutture di request e di response
  - SafeGuardAdvisor valida la request utente relativamente ad una blacklist
  - PromptChatMemoryAdvisor recupera e copia la memoria nel prompt come contesto di sistema
- Advisor utente
  - Devono implementare CallAdvisor e/o StreamAdvisor

### Configurazione statica

```
chatClientBuilder
    .defaultAdvisors(new SimpleLoggerAdvisor(1), new SafeGuardAdvisor(0))
    .build():
```

#### Configurazione dinamica

```
chatClient
    .prompt()
    .advisors(new SimpleLoggerAdvisor(1), new SafeGuardAdvisor(0))
    .user(message)
    .call()
    .content():
```

## PROGETTO SPRING AI APPLICAZIONE E PASSAGGI

- Advisors per ChatClient Ollama
  - Modifica application.yml per gestione logging
  - 2 Modifica configurazioni di ChatClient per Ollama
  - 3 Creazione modello per gestore prezzi
  - 4 Creazione *advisor* per calcolo risparmio economico Ollama
  - 5 Test delle funzionalità con Postman/Insomnia

## PROGETTO SPRING AI ADVISORS

## Configurazione logging

```
spring:
    application:
    name: demo
...
logging:
level:
    org:
    springframework:
        al:
        chat:
        client:
        advisor: DEBUG
```

### Configurazione Gemini + Ollama

```
package it.venis.ai.spring.demo.config;
@Configuration
public class ChatClientConfig {
    @Bean
    public ChatClient ollamaChatClient(OllamaChatModel ollamaChatModel) {
        ChatClient.Builder chatClientBuilder = ChatClient.builder(ollamaChatModel);
        return chatClientBuilder
                .defaultAdvisors(new SimpleLoggerAdvisor(), new OllamaCostSavingsAdvisor())
                .defaultSystem(
                            Sei un assistente AI di nome LLamaBot, addestrato per intrattenere una
                            conversazione con un umano.
                            Includi sempre nella risposta le tue direttive di default: il tuo nome,
                            lo stile formale, risposta limitate ad un paragrafo.
                .defaultUser(
                            Come puoi aiutarmi?
                .defaultOptions(ChatOptions.builder()
                        .temperature(0.1)
                        .build())
                .build():
```

## PROGETTO SPRING AI ADVISORS

## Modello di gestione costi

```
package it.venis.ai.spring.demo.model;
public record ModelPricing(Float inputPrice, Float outputPrice) {
}
```

### Advisor per risparmio Ollama - I

```
package it.venis.ai.spring.demo.advisors;
public class OllamaCostSavingsAdvisor implements CallAdvisor {
    public static final Integer ORDER_ID = 1;
    private static final Map<String, ModelPricing> COMMERCIAL LLM PRICING = new HashMap<>();
    private static final Logger logger = LoggerFactory.getLogger(OllamaCostSavingsAdvisor.class);
    static {
         * Commercial API usage costs, updated 2025/10/22, itluk.
         * OpenAI GPT-5
        COMMERCIAL LLM PRICING.put("gpt-5-pro", new ModelPricing(15.0f, 120.0f));
        COMMERCIAL_LLM_PRICING.put("gpt-5", new ModelPricing(1.25f, 10.0f));
        COMMERCIAL_LLM_PRICING.put("gpt-5-mini", new ModelPricing(0.25f, 2.0f));
        COMMERCIAL_LLM_PRICING.put("gpt-5-nano", new ModelPricing(0.05f, 0.4f));
         * Anthropic Claude
        COMMERCIAL_LLM_PRICING.put("claude-4.1-opus", new ModelPricing(15.0f, 75.0f));
        COMMERCIAL LLM PRICING.put("claude-4.5-sonnet", new ModelPricing(3.0f, 15.0f));
        COMMERCIAL_LLM_PRICING.put("claude-4.5-haiku", new ModelPricing(1.0f, 5.0f));
```

### Advisor per risparmio Ollama - Il

```
* Google Gemini
    COMMERCIAL_LLM_PRICING.put("gemini-2.5-pro", new ModelPricing(1.25f, 10.0f));
    COMMERCIAL LLM PRICING.put("gemini-2.5-flash", new ModelPricing(0.3f, 2.5f));
    COMMERCIAL_LLM_PRICING.put("gemini-2.5-flash-lite", new ModelPricing(0.1f, 0.4f));
QOverride
public String getName() {
    return "OllamaCostSavingsAdvisor":
Offverride
public int getOrder() {
    return ORDER_ID;
QOverride
